#### Creation of municipal design bureau - Institute for spatial development (2016)

Sadova street after reconstruction (2016)

## Sadova street after reconstruction (2016)

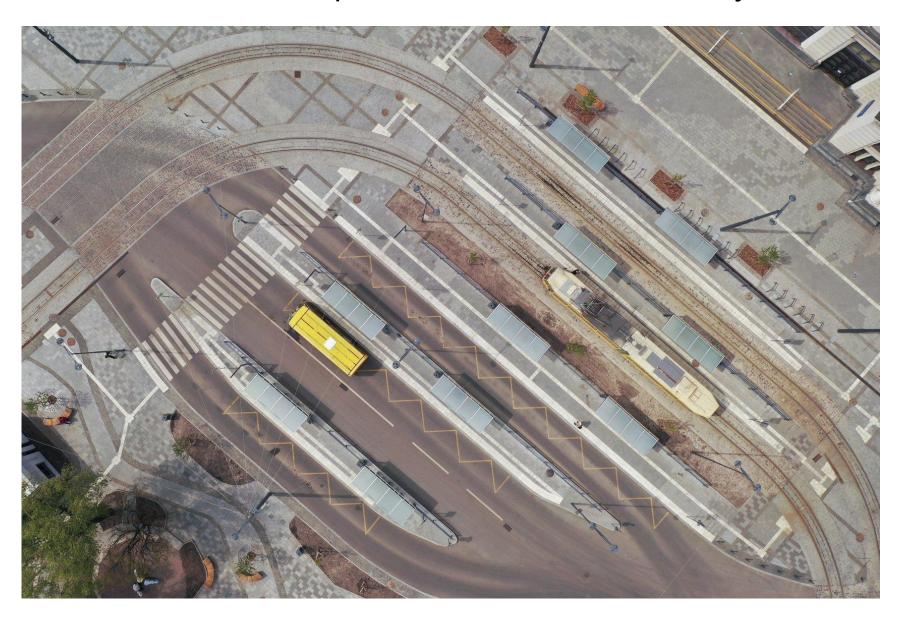

#### **PLANNING**

• 2017 - 2019

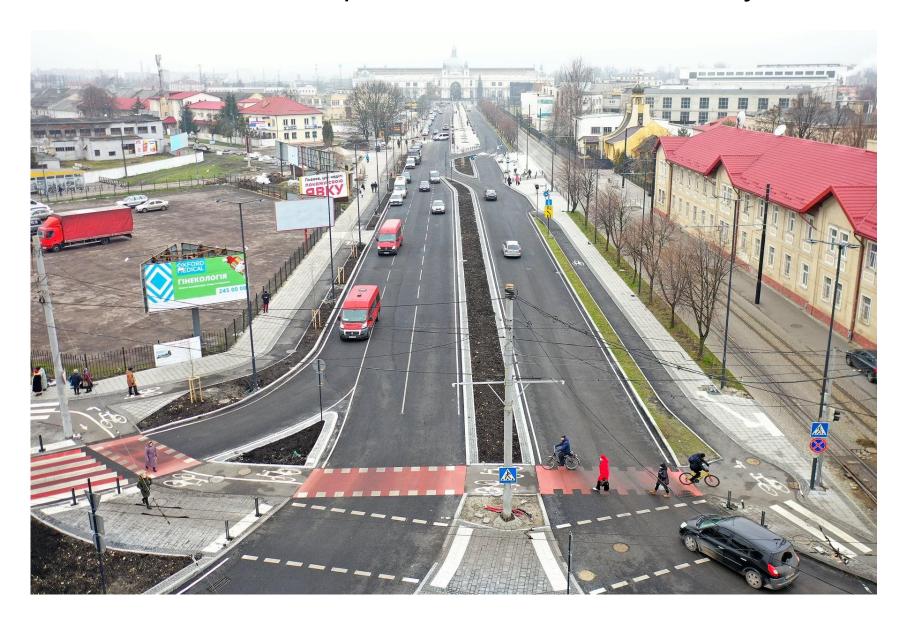

#### **CONSTRUCTION**

• 2019 - 2021

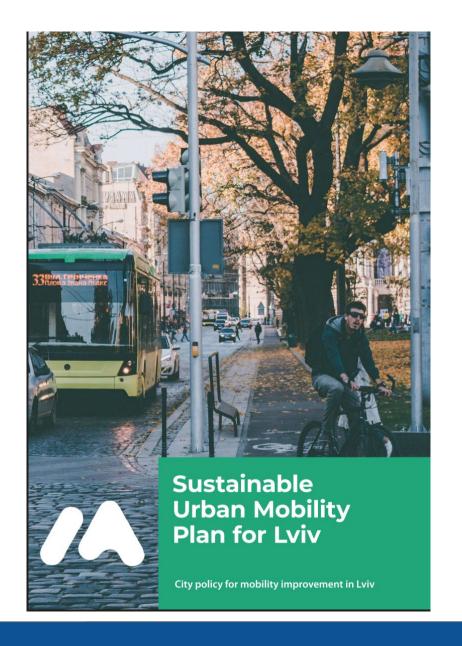

#### Adoption of Lviv's Sustainable Urban Mobility Plan (2020)

#### CHALLENGES

INTERMS OF MOBILITY PRIORITIES, DEVELOPMENT CAPACITY ANALYSIS OF LIVI AND THE IMPLEMENTED PROJECTS, SEVEN CHALLENGES HAVE BEEN IDENTIFIED THAT COME IN THE WAY TO SUSTAINABLE MOBILITY AND HIGH QUALITY OF LIFE STANDARDS IN THE CITY.

#### **Priorities**

Therefore, the following priorities have been identified

Each of us can move around on foot. Walking is good for your health, it is free of charge, and environmentally most friendly. That is why walking on foot is No 1. A survey showed that over 50% of residents take public transport for daily transfers – making it a priority No 2. Priority No 3 would rather be the mode of transfort with high capacity such as cycling which is currently not popular enough due to lack of sale infrastructure. The following level in the priority pyramid includes vehicles delivering goods and materials.

It has been left out of focus, thus generating issues for all other modes of transport. Private cars follow. It is the least efficient mode of transport in the city, it requires much space, bears lethal risks, and pollutes the air. The last but not least priority goes for individual moter vehicles standing in the private of the standard of the standard private in the standard private in

Modes of transport alternative to cars shall become as comfortable and attractive as possible since it is hard to imagine what could happen if the current 23% to 52% correlation of private cars and public transport is going to lose 10% more from public transport to cars

.

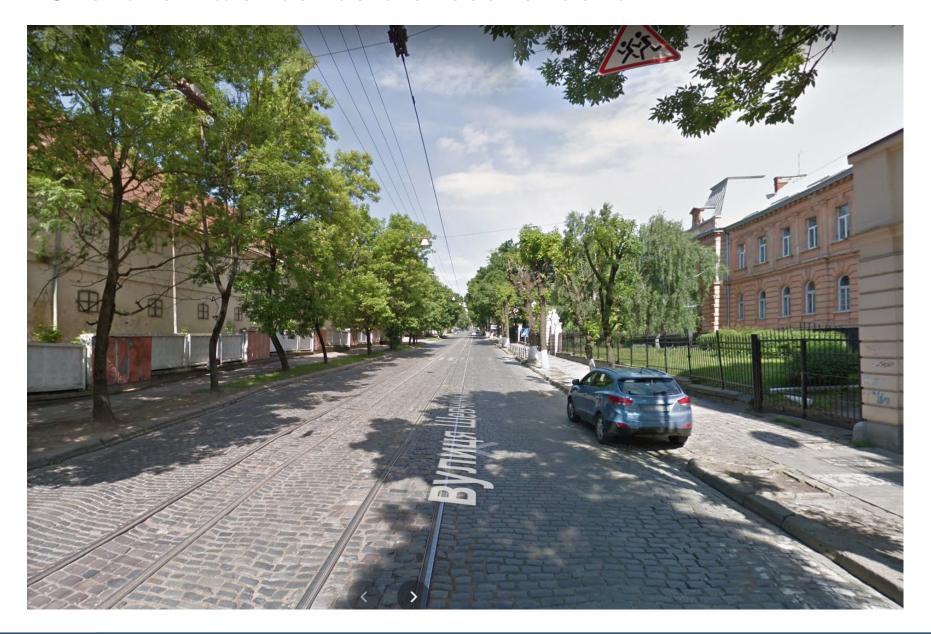

## Reconstruction of Shevchenka street (2020 -...)

#### Shevchenka street before reconstruction

## Reconstruction of B. Khmelnytskoho street (2021)

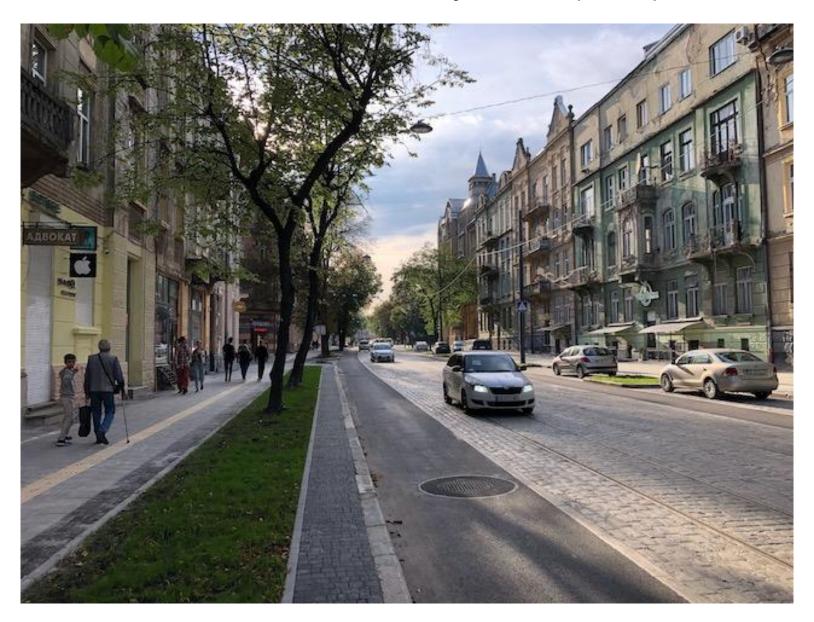

## B. Khmelnytskoho street before reconstruction
